AFFIX PATIENT LABEL

**Infusion Protocol for Kiovig 10%**

Dose	<input type="text"/>
Patient's Weight (kg)	<input type="text"/>
Sample sent to microbiology (tick when complete)	<input type="checkbox"/>
Baseline routine bloods (tick when complete)	<input type="checkbox"/>
Pre-medication prescribed on drug chart if required (tick when complete)	<input type="checkbox"/>

**Infusion Rates**

<b>Patients receiving first and second infusions</b>	<b>Dates:</b>
--	---------------

Infusion rate	0.5ml/kg/hr	First 30 minutes
Then	1.0ml/kg/hr	Second 30 minutes
Gradually increasing to	4.0ml/kg/hr	

**Calculate for this patient**

0.6ml x weight per hour =		First 30 minutes
1.2ml x weight per hour =		Second 30 minutes
1.8ml x weight per hour =		Third 30 minutes
2.4ml x weight per hour =		Subsequently

<b>Patients receiving third and subsequent infusions up until 6 months</b>	<b>From Date:</b>
--	-------------------

If no adverse reactions have occurred, proceed as follows

Infusion rate	1.0ml/kg/hr	First 15 minutes
Then	2.0ml/kg/hr	Second 15 minutes
Then	3.0ml/kg/hr	Third 15 minutes
Then	4.0ml/kg/hr	Etc
Then	6.0ml/kg/hr	
Gradually increasing to	8.0ml/kg/hr	(FOR PID ONLY - not all patients will be able to tolerate this high rate)

**Calculate for this patient**

1.0ml x weight per hour =		First 15 minutes
2.0ml x weight per hour =		Second 15 minutes
3.0ml x weight per hour =		Etc
4.0ml x weight per hour =		
6.0ml x weight per hour =		
8.0ml x weight per hour =		Not all patients will be able to tolerate this high rate
