

Clinical nurse specialist and breast care nurse

We are highly qualified and experienced nurses who specialise in the care and support of people with breast problems. We work closely with the doctors involved in your care, providing a confidential service from the first time you attend the Mermaid Centre with a breast problem.

Our main aim is to support you through diagnosis and treatment, offering relevant help and information and referring you for further support if necessary.

We are available for contact throughout the course of your treatment. However, you can continue to use our service for longer if you wish. Following your course of treatment, any future contact can be arranged by self-referral or by other referral.

The clinical nurse specialist and breast care nurse are also your key workers who will help co-ordinate your pathway of care.
